

CLAIMS

1. A method of forwarding a call directed to a wireless device operational on a wireless network to a destination number comprising:

detecting the presence of the wireless device by a base unit, the base unit including a switch having at least two settings;

determining the destination number to which the call will be forwarded;

creating a data message comprising a call forwarding instruction;

causing a communication between the wireless device and the wireless network wherein the data message is communicated to the wireless network; and

wherein the determining step is performed by the base unit scanning a memory location in the wireless device to retrieve the destination number based on the switch setting.
